

Brava!® Enterprise

View | Collaborate | Redact | Publish

Brava!® makes it easy to view and collaborate on virtually any file, including office and PDF documents, CAD drawings and image files. It eliminates the need to install the native application on every user's desktop and its simple, easy-to-use interface makes large-scale deployments and rapid user adoption a reality in virtually any business environment. Simply put, Brava makes sharing documents safe and easy.

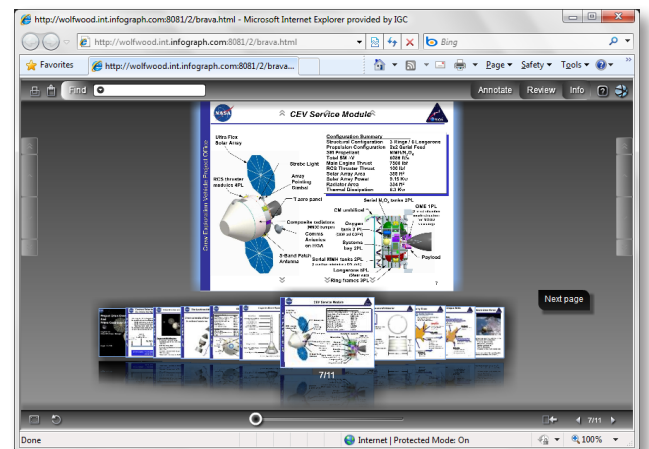

Brava was designed to be integrated. It has a completely customizable interface and can be inserted seamlessly into any business process. In fact, it has integrations to all the leading content management systems, including EMC Documentum, IBM FileNet, Microsoft SharePoint and Open Text Content Server.

Key Features and Benefits

Browser-Based Viewing and Annotation

Brava offers a modern interface for viewing and annotating hundreds of file formats, making user adoption easy and training virtually unnecessary. The menus are broken out by function, making it more intuitive to end-users, and the interface can easily be re-skinned to suit any working environment. Brava provides industry-leading speed and fidelity for viewing and printing functions.

Changemarks® allow users to add comments to a document or drawing. And now with threaded discussions, groups of users can more easily collaborate and share comments. The tool lets users reply to each other and accept or reject comments—recording a complete audit trail of both the discussion and the outcome.

Brava Enterprise also offers a zero-client Flash viewer option for any Flash-enabled browser or device.

Advanced Stamping, Watermarks and Banners

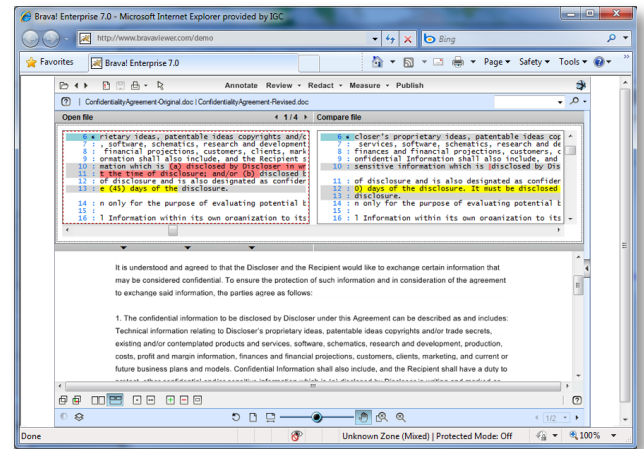

Brava's stamp features allow users to add stock stamps to documents like APPROVED, REJECTED and CANCELLED, or to create custom stamps. Bi-directional dynamic stamps allow organizations to create custom stamps that can pull or push metadata from an integrated database.

Not only does Brava allow you to control who can view and print documents, it allows you to force watermarks and banners to display for onscreen views and/or printed documents. These can contain information like user, date and even the IP address or host name of the user's machine. It can also include metadata and attributes from a database.

Key Features and Benefits (continued)

Brava Compare

Compare different versions of a document or drawing with Brava's built-in comparison tool—useful for comparing drawing and document revisions/versions and faxed versus signed contracts. Brava offers pixel-to-pixel and text comparison modes so users can choose the view best suited to their file type. Comparison views can also include annotations for easy change verifications, ensuring no changes are left unincorporated.

Intelligent Redaction Tools

Brava's redaction tools allow removal of sensitive information from documents, drawings and images, either automatically with intelligent pattern matching and text search or manually with area selection tools. Brava offers a redaction draft mode to accommodate review cycles; the ability to redact full-pages rather than just selected areas; a filter capability to find redactions without reason codes (to address Freedom of Information requirements); and the ability to do partial redactions, useful for redacting all but the last four digits of a credit card or bank account number.

Protect Sensitive Information and Share Documents Securely

When integrated into a larger solution, Brava honors all user permissions to restrict unauthorized users from printing or saving documents locally. Companies can provide users access to needed content while preventing information from ever leaving the repository.

Users can publish to an encrypted, compressed format specifically designed to help companies control content that is shared outside the organization. This format is called Content Sealed Format, or CSF, and can be used to assign a password and expiration date and control the viewing and printing of any file.

Working with CAD Files

Changemarks step reviewers through every comment, ensuring nothing is missed. This feature is particularly important for large drawings and multi-page files. With CAD files, vector data is not converted to pixels (rasterized), thus maintaining the integrity and fidelity of the drawing. Brava's compare feature allows users to easily view at-a-glance any modifications that have been made to a drawing.

A take-off count allows users to count items on drawings such as doors and windows and aggregate areas for flooring or other materials for purchasing decisions. Users can create separate profiles for each count using different colors, and then create a report in a spreadsheet format.
